Patent No. 5928651
GENERAL INFORMATION:
APPLICANT: Barenkamp, Stephen J
TITLE OF INVENTION: High Molecular Weight Surface Proteins
TITLE OF INVENTION: of No. 5928651-Typeable Haemophilus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NUMBER OF SEQUENCES: 10

Patent No. 6245337
GENERAL INFORMATION:
APPLICANT: St. Geme III, Joseph W.
APPLICANT: Falkow, Stanley
TITLE OF INVENTION: Haemophilus Adherence and Penetrati
TITLE OF INVENTION: Protein
NUMBER OF SEQUENCES:
CORRESPONDENCE ADDRESS:
ADDRESSEE: Flehr, Hobbach, Test, Albritton & Herbert
                                                                                  NAME: Vance, Dolly A.
REGISTRATION NUMBER: 39,054
REFERENCE/DOCKET NUMBER: A-61053-1/RFT/RMS/DAV
TELECOMNUNICATION INFORMATION:
TELEPHONE: (415) 781-1989
APPLICATION NUMBER: PCT/US96/4031 FILING DATE: 22-MAR-1996 ATTORNEY/AGENT INFORMATION:
                                                                                                                                                                                TELEPHONE: (415) 781-1989

hypothetical protein 115C2.10 - fruit fly (Drosophila melanogaster)
C; Species: Drosophila melanogaster
C; Species: Janua-1999 #sequence_revision 13-Aug-1999 #text_change 17-Nov-2000
C; Accession: Ti3389
R; Salles, C.; Valenti, P.; Darlamitsou, A.; Henderson, N.; Campbell, L.; Glover, D. submitted to the EMBL Data Library, May 1999
A; Description: Sequencing the distal X chromosome of Drosophila melanogaster.
A; Reference number: Z17665
A; Cacession: Ti3389
A; Status: preliminary; translated from GB/EMBL/DDBJ
A; Status: preliminary; canslated from GB/EMBL/DDBJ
A; Molecule type: DNA
A; Residues: 1-1291

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DETERMINANTS TO THE POSTERIOR POLE OF THE DROSOPHILA EGG AND FOR BICOLD RNA TO LOCALIZE CORRECTLY TO THE ANTERTOR POLE.

FOR BICOLD RNA TO LOCALIZE CORRECTLY TO THE ANTERTOR POLE.

THE POSTERIOR POLE.

TISSUE SPECIFICITY: POLAR GRANULES AT THE POSTERIOR POLE OF THE COCYTE, AND BY THE TIME THE EGG IS LAID, AT THE ANTERIOR POLE.

DOMAIN: CONTAINS A PROLINE-RICH DOMAIN. THE INSERTION OF THIS DOMAIN IN THE DRBM 2 DOMAIN IS REQUIRED FOR STAU-OSKAR MRNA

1 SUBCELLULAR LOCATION: CYTOPLASMIC.

1 ALTERNATIVE PRODUCTS: 2 ISOFORMS; A LONG FORM (SHOWN HERE) AND 1 SHORT FORM; ARE PRODUCTED BY ALTERNATIVE SPLICING.

1 TISSUE SPECIFICITY: CNS AXONS AND BODY WALL MUSCLES.

1 DEVELOPMENTAL STAGE: EMBRYONIC AXONOGENESIS.

1 PTM: PROBABLY PHOSPHORYLATED BY THE ABL TYROSINE KINASE.

1 SIMILARITY: CONTAINS 1 PID DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PHOSPHORYLATION (BY ABL) (PROBABLE).

--- ARANGACTIVATOR PROTEIN VPI6 ASSOCIATES WITH HCF. BINDING TO HCF
ACTIVATES VPI6 FOR ASSOCIATION WITH THE OCTAMER MOTIF-BINDING
PROTEIN OCT-1, TO FORM A MULTIFROTEIN-DNA COMPLEX RESPONSIBLE FOR ACTIVATING TRANSCRIPTION OF THE HSV IMMEDIATE EARLY GENES (BY STANLARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
